Head Installation Sets (HIS)

The right gasket set for installing a fully assembled head

Fel-Pro® offers Head Installation Sets (HIS) designed to save money by giving the technician the exact gaskets needed for installing an already reconditioned or fully assembled head. These sets do not include the parts that aren't needed, so technicians aren't forced to buy parts that aren't required. For example, the Fel-Pro HIS set for one common domestic engine eliminates the plastic intake manifold gasket and exhaust pipe-to-manifold gasket included in a complete head set, because these parts aren't required for installation of a fully assembled head.

Fel-Pro Head Installation Sets have the right technology

Each Fel-Pro HIS set includes the ideal gasket technologies for the application. In select cases, the HIS set will include a Fel-Pro PermaTorqueMLS® multi-layer steel head gasket, rather than a composite-type gasket, due to the engine's more demanding operating characteristics. HIS sets also include the respected PermaDry® molded-rubber valve cover gaskets, when required. Fel-Pro Head Installation Sets (HIS) include as required:

- Cylinder head gaskets
- Intake manifold gaskets
- Intake manifold plenum gasket
- Exhaust manifold gaskets
- Valve cover gaskets
- Valve cover grommets
- Valve cover semi-circular plug
- Spark plug tube seals
- Push rod cover gaskets
- Push rod cover grommets
- Water outlet gasket
- Thermostat housing gasket
- Distributor mounting gasket
- TBI mounting gasket
- Throttle body mounting gasket
- Fuel injector seals
- Air bypass gasket
- Air pump gaskets
- EGR valve gaskets
