

## Installation Aids

# “Everything You Need” Extras

### “Little” Extras Make A Big Difference

In addition to the world-class quality and innovation found in products like PermaTorqueMLS<sup>®</sup> and PermaDryPlus<sup>®</sup> gaskets, Fel-Pro<sup>®</sup> provides an array of value-added extras. Packaged with select Fel-Pro gaskets, these extras make installation faster and easier than ever, and help technicians complete the job correctly for a leak-proof seal.

### Helpful extras packaged with Fel-Pro<sup>®</sup> gaskets include:

#### Sealing Chemicals

RTV silicone sealants are included, as necessary, to ensure a proper seal. These sealants are used to prevent leakage at the corner joints of multi-piece gaskets such as oil pans, intake manifolds, and valve covers. The sealants may also be used to enhance fluid sealability in specific applications, like coolant ports or intake valley pan gaskets. Helpful instructions on sealant use are included in the accompanying FIT Forms.

#### FIT Forms

It’s impossible for technicians to remember the installation details for every type of engine they service. But the FIT (Fel-Pro Installation Tips) Forms included with most Fel-Pro gasket sets provide the crucial information for tough or unusual installations. These tips alert technicians to special procedures that will speed installation and prevent problems. They help avoid guesswork that can waste time and cost money.

It’s a help seldom provided by competitors.
