
Vehicle Relearn Instruction*

Before beginning installation and vehicle relearn, verify application fitment with your parts provider or online at www.vdo.com/usa or www.redi-sensor.com

SAP # V0511019877GM-C

1. Activate parking brake. Adjust tires to vehicle placard pressure.
2. Insert key and turn ignition ON (engine off).
3. Press vehicle information button on the Driver Information Center (DIC) until LEARN TIRE POSITIONS displays on screen.
4. Enable vehicle learn mode by pressing the SET/RESET button. Horn will beep twice and the DIC will display TIRE LEARNING ACTIVE. If vehicle learn mode cannot be enabled, see V0511019877GM-A
5. Use TPMS scan tool trigger at the valve stem in the left-front tire until the horn beeps.
6. Repeat step 5 for remaining tires in the following order: right-front, right-rear, left-rear. Horn will beep twice when cycle is complete.
7. Turn ignition to OFF position and remove key.

* Procedure assumes OE (original equipment) wheels, OE tires, OE TPMS sensors (direct TPMS) or REDI-Sensor multi-application TPMS sensors (direct TPMS), and may vary if otherwise equipped.
